

S9705 series

Converts light level to frequency of output pulse

The S9705 and S9705-01DT are photo ICs that combine a photodiode and a current-to-frequency converter on a CMOS chip. Output is a square wave (50% duty ratio) with frequency directly proportional to light level incident on the photodiode. The CMOS level digital output allows direct connection to a microcontroller or other logic circuitry. The S9705 series has wide dynamic range and light level can be easily measured when used with a digital counter.

Features

- Converts light level to frequency
- Wide dynamic range: 5 orders of magnitude
- Excellent linearity
- Output timing reset function
- Digital output for direct interface to microcontroller
- 4-pin plastic package

Applications

- Liquid crystal monitor backlight dimmer for mobile devices
- Brightness adjustment for large-screen liquid crystal TV
- Lighting dimmer
- Replacement for CdS photoconductive cells

*1: When there is a temperature difference between a product and the surrounding area in high humidity environment, dew condensation may occur on the product surface. Dew condensation on the product may cause deterioration in characteristics and reliability.

*2: JEDEC level 4

*3: JEDEC level 5a

Note: Exceeding the absolute maximum ratings even momentarily may cause a drop in product quality. Always be sure to use the product within the absolute maximum ratings.
