

CCD image sensor

S9037/S9038 series

High-speed operation, back-thinned FFT-CCD

The S9037/S9038 series FFT-CCD image sensors were developed for high-speed line scan cameras. Since an on-chip amplifier having a wide bandwidth is used to an image sensor, a pixel rate of 10 MHz can be obtained. The S9037/S9038 series image sensors also deliver a high line scan rate equivalent to interline CCD sensors when used in line binning operation mode, because they have an active area pixel format where the number of vertical pixels is less than the number of horizontal pixels. This makes the S9037/S9038 series suitable for line scan cameras.

The S9037/S9038 series image sensors have a pixel size of 24 \times 24 μ m and are available in pixel formats of 512 \times 4 pixels and 1024 \times 4 pixels.

The S9038 series has a one-stage thermoelectric cooler assembled in the same package allowing stable operation at cooled temperatures. Both the S9037/S9038 series image sensors use a quartz glass window equivalent to SUPRASIL glass that provides high transmittance even at 193 nm wavelength. These image sensors also have stable quantum efficiency in the UV region making them suitable for excimer laser monitors.

Applications

Excimer laser monitors

High-speed line scan cameras

Features

- High-speed operation: 10 MHz
- Pixel size: 24 × 24 μm
- Line/pixel binning operation
- S9038 series: one-stage thermoelectric cooling
- High quantum efficiency: 90% or more at peak
- MPP operation

Structure

Parameter	S9037-0902	S9037-1002	S9038-0902S	S9038-1002S		
Pixel size (H × V)	24 × 24 μm					
Number of total pixels (H × V)	520 × 6	1044 × 8	520 × 6	1044 × 8		
Number of effective pixels (H × V)	512 × 4	1024 × 4	512 × 4	1024 × 4		
Image size (H × V)	12.288 × 0.096 mm	24.576 × 0.096 mm	12.288 × 0.096 mm	24.576 × 0.096 mm		
Vertical clock		2 ph	ases			
Horizontal clock		2 ph	ases			
Output circuit		Two-stage MOSFE	T source follower			
Package	24-pin ceramic DIP					
Window material*1	Quartz window equivalent to SUPRASIL*2 AR-coated sapphire*3					
Cooling	Non-cooled One-stage TE-cooled					

*1: Window-less type (ex. S9037-0902N) is available as option.

(Temporary window is fixed by tape to protect the CCD and wire bonding.) *2: Resin sealing

*3: Hermetic sealing

Device structure (conceptual drawing of top view)

Note: When viewed from the direction of the incident light, the horizontal shift register is covered with a thick silicon layer (dead layer). However, long-wavelength light passes through the silicon dead layer and may possibly be detected by the horizontal shift register. To prevent this, provide light shield on that area as needed.

Specifications of built-in TE-cooler (Typ.)

Parameter	Symbol	Condition	S9038-0902S	S9038-1002S	Unit
Internal resistance	Rint	Ta=25 °C	2.5	1.2	Ω
Maximum current*14	Imax	Tc*15=Th*16=25 °C	1.5	3.0	A
Maximum voltage	Vmax	Tc*15=Th*16=25 °C	3.8	3.6	V
Maximum heat absorption*17	Qmax		3.4	5.1	W
Maximum temperature of heat radiating side	-		70	70	°C

*14: If the current greater than this value flows into the thermoelectric cooler, the heat absorption begins to decrease due to the Joule heat. It should be noted that this value is not the damage threshold value. To protect the thermoelectric cooler and maintain stable operation, the supply current should be less than 60% of this maximum current.

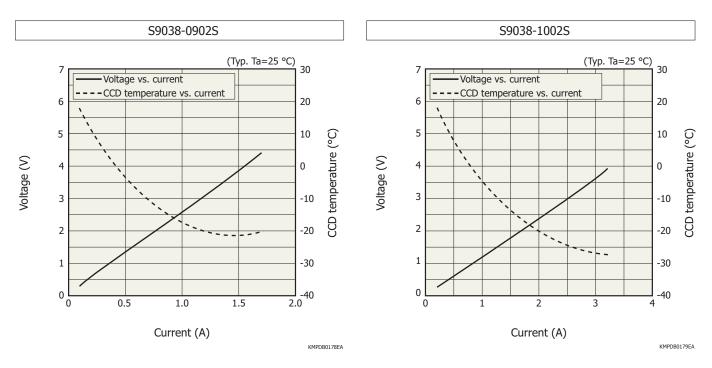

*15: Temperature of the cooling side of thermoelectric cooler

*16: Temperature of the heat radiating side of thermoelectric cooler

*17: This is a theoretical heat absorption level that offsets the temperature difference in the thermoelectric cooler when the maximum current is supplied to the unit.

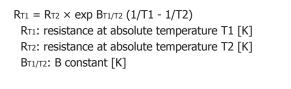

CCD image sensor

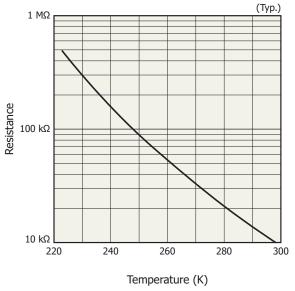

Specifications of built-in temperature sensor

A chip thermistor is built in the same package with a CCD chip, and the CCD chip temperature can be monitored with it. A relation between the thermistor resistance and absolute temperature is expressed by the following equation.

The characteristics of the thermistor used are as follows. R_{298}=10 k \Omega \$\$B_{298/323}=3450 K \$\$

KMPDB0111EB

Precautions (electrostatic countermeasures)

- Handle these sensors with bare hands or wearing cotton gloves. In addition, wear anti-static clothing and use a wrist band with an earth ring, in order to prevent electrostatic damage due to electrical charges from friction.
- Avoid directly placing these sensors on a work-desk or work-bench that may carry an electrostatic charge.
- · Provide ground lines or ground connection with the work-floor, work-desk and work-bench to allow static electricity to discharge.
- · Ground the tools used to handle these sensors, such as tweezers and soldering irons.

It is not always necessary to provide all the electrostatic measures stated above. Implement these measures according to the amount of damage that occurs.

Element cooling/heating temperature incline rate

Element cooling/heating temperature incline rate should be set at less than 5 K/min.
